Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                 Score
                                                            42.5

"Modes of expression and common structural features of the complete
phenylalanine ammonia-lyase gene family in parsley.";
Proc. Natl. Acad. Sci. U.S.A. 92:5905-5909 (1995).
-!- FUNCTION: Controls carbon flux to pigments essential for
pollination or UV protection, to numerous pytoalexins synthesized
by plants when challenged by pathogens, and to lignins.
-!- CATALYTIC ACTIVITY: Trans-cinnamate + NADPH + O(2) = 4-.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: The sigma factor is an initiation factor that promotes attachment of the RNA polymerase to specific initiation sites and then is released. This is the primary sigma-factor of this bacteria (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: Belongs to the sigma-70 factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MYCGE

The LBP/LPS complex so to interact with the CD14 receptor.
SUBCELLULAR LOCATION: Secreted.
SIMILARITY: Belongs to the BPI/LBP/Plunc superfamily. BPI/LBP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     family.
